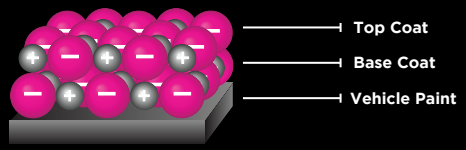
CERAMIC PRO®
ION COATING PACKAGES

ULTIMATE ION PACKAGE
Lifetime Warranty

2 Layers	**ION BASE** On all paint, plastics & lights
1 Layer	**ION TOP COAT** On all paint, plastics & lights
1 Layer	**CP - WHEEL & CALIPER** On all wheel faces
1 Layer	**CP - GLASS** On all glass

ION PACKAGE
7-Year Warranty

1 Layer	**ION BASE & ION TOP** On all paint, plastics & lights
1 Layer	**CP - WHEEL & CALIPER** On all wheel faces
1 Layer	**CP - GLASS** On all glass



ION EXCHANGE TECHNOLOGY

This premium-grade ceramic coating is exclusively sold and installed by Ceramic Pro's network of Elite Dealers that provide only the highest level of service.

CERAMIC PRO®
ION EXCHANGE TECHNOLOGY

THE FUTURE IS NOW

Ceramic Pro is the Global Leader in Nanoceramic Technology. Advancements in manufacturing technology have allowed Ceramic Pro to once again revolutionize the ceramic coating industry with the launch of Ceramic Pro ION and ION Top Coat – the world's most advanced automotive protective coating ever developed

Ceramic Pro ION is a two-component ceramic coating system that utilizes revolutionary ION Exchange Technology to fuse multiple coating layers into a single, durable, and robust protected surface. This coating technology increases the strength of the atomic bond within the two coatings, and the original substrate once applied.

The result is a ceramic coating that produces twice the durability, integrity, and longevity of traditional nanoceramic coatings.

CERAMIC PRO®

ION

Thick & Durable
A single layer of ION provides the same protection as two layers of traditional nanoceramic coatings

Abrasion Resistance
Superior abrasive & chemical resistance

Hydrophobic
Is the ability of a coating to repel liquids and various contaminants that may be contained in them.

Hardness
Twice the Strength of traditional professional-grade nanoceramic coatings

Superior gloss
Exceptional shine and mirror-like finish

Density
High density guarantees that there are no pores or other imperfections that may leave a way for an unwanted substance to reach the surface underneath the coating.

ION EXCHANGE
TECHNOLOGY

Ceramic Pro ION surface protection system consists of two products. Both of them must be applied in the right succession to activate the ION exchange process and enjoy the maximum performance of our new technology. When installed by a Ceramic Pro Elite Dealer, ION Exchange Technology creates the World's most advanced and strongest nanoceramic coating.

THE ION COATING SYSTEM

ION BASE COAT

First stage of the ION coating system, it provides a solid primary layer of coating that fills microscopic imperfections found in clear coats. As a result, it becomes resistant to oxidation, corrosion, abrasion, and UV damaged.

ION TOP COAT

The second stage of the ION coating system helps activate the ION exchange reaction. This provides superior hydrophobic properties and increased chemical and abrasive resistance.
